

GitHub Contribution Flow ■

Fork	Clone	Branch	Change	Commit	Push	Pull Request
------	-------	--------	--------	--------	------	--------------

1. Fork Repo

Copy the original repository to your GitHub account.

2. Clone Repo

```
git clone https://github.com/YOUR-USERNAME/ignite2026.git cd ignite2026
```

3. Create Branch

```
git checkout -b your-branch-name
```

4. Make Changes

Edit files in VS Code.

5. Commit Changes

```
git add . git commit -m 'your message'
```

6. Push Code

```
git push origin your-branch-name
```

7. Pull Request

Submit PR on GitHub to merge your changes.

Interview Explanation ■

This workflow ensures safe collaboration. Developers work on separate branches, make changes independently, and submit pull requests for review. It prevents conflicts and maintains code quality in team environments.
